## **Observing Books by Alvin Huey**

Hickson Group Observer's Guide, Second edition  
The Abell Planetary Observer's Guide, Second edition  
Observing the Arp Peculiar Galaxies, Revised edition

## **Observing Guides by FaintFuzzies.com**

Herschel Objects – Parts I, II, and III  
Selected Small Galaxy Groups  
Galaxy Trios and Triple Systems  
Globular Clusters – North of  $-50^\circ$   
Planetary Nebulae and Supernovae Remnants  
The Local Group  
Flat Galaxies  
Abell Galaxy Clusters  
Voronstov-Velyaminov Catalogue – Part I and II  
Rose Catalogue of Compact Galaxies  
Variable Galaxies  
Selected Shakhbazian Groups  
Ring Galaxies  
Palomar Compact Galaxy Catalogue  
Object of the Week 2012 and 2013 – Deep Sky Forum

# How to Use the Atlas

On the upper left, the naked eye field with the TelRad™ recticle is superimposed on the Planetary Nebula. The bottom chart is a finder field about 4.8° across and 3.0° high. The finder field is wide enough for the finder scope and detailed enough for those who choose to use a low power eyepiece as a “finder”, like I do. The limiting magnitude of the field stars is generally set to 12.0 but set to a lower limit in star rich regions. Pay attention to the magnitude scale on the bottom left. The field of the DSS image is superimposed on the finder chart. The field size of the image is overlaid on the finder chart.

On the upper right, the negative DSS image is provided. The field is generally 15' square unless noted.

The images are oriented north pointed up and west to the right. A table is provided below giving some basic information of the Planetary Nebula.

The table provided at the bottom of the page includes the following data.

- **Other ID** – Other ID’s associated with this object
- **Type** –

Type	Description
1	Stellar
2a	Smooth disc – brighter towards the center
2b	Smooth disc – uniform brightness
2c	Smooth disc – traces of ring structure
3a	Irregular disc – very irregular brightness distribution
3b	Irregular disc – traces of ring structure
4	Ring structure
5	Irregular form
6	Anomalous form

- **RA** and **Dec** – Epoch 2000 celestial coordinates
- **Mag** – magnitude (sources Megastar or Hynes). Visual magnitude used wherever possible.
- **\*Mag** – Magnitude of the central star
- **Size** – listed size of the object.

The Planetary Nebulae Catalogue (pages 6-12) provides the following information:

- **Page** – Page number of the detailed finder charts
- **AL** – Denotes if the planetary nebula qualified as part of the Astronomical League Observing program which results in the Pin. For details, see [www.astroleague.org/al/obsclubs/planetarynebula/planetneb1.html](http://www.astroleague.org/al/obsclubs/planetarynebula/planetneb1.html)
- **Object** – listed name
- **Type** – listed type
- **RA and Dec** – Epoch 2000.0 coordinates
- **Size** – listed size
- **Mag** – Listed magnitude
- **Mag\*** - Listed magnitude of the central star
- **Con** – Home constellation of the object

Several additional indices are provided at the end with the following sort orders.

1. By Object name (eg NGC, IC, PK, etc)
2. Astronomical League pin requirements (filtered)
3. By Object Common Name (filtered)

Any comments or to share any observations, send them to [Alvin.Huey@FaintFuzzies.com](mailto:Alvin.Huey@FaintFuzzies.com).

Any feedback or suggestions would be greatly appreciated. I hope to keep this resource updated and made available to all of you, the deep sky observer.
