How to Use the Atlas

Galaxy Trios and Triple Systems

The top left panel contains the naked eye field with the TelRad™ superimposed on the center of the galaxy trio or triple system. The top right panel contains the inverted labeled DSS image. The image is generally 15' square, otherwise larger.

The bottom panel is a finder field of about 4.8° across and 3.0° high. The finder field is wide enough for the finder scope and detailed enough for those who choose to use a low power eyepiece as a “finder”, like I do. The limiting magnitude of the field stars is set to 12.0 (or 11.0 in star rich regions). The field of the DSS image is superimposed on the finder chart. All charts and images are oriented north pointed up and west to the right.

I've intentionally listed one galaxy of the trio on the header to reduce clutter. The member

galaxies are in the table at the bottom and in the index list. If you are using the PDF version, you can use the search feature to look for any object in this catalogue.

A table provided at the bottom of each page includes key data for each member of the galaxy trio.

RA and **Dec** provided is the approximate center of the trio/triple galaxy system in Epoch 2000.0

Magnitude is given along with the **Size**.

The source of the **magnitude** is generally from MegaStar version 5, which is pulled from RC3 (Third Reference Catalogue of Bright Galaxies). When the magnitude and/or size are not available, I've used the information from NED. Blue magnitude is **b**, photographic is **p** and visual is **v**. If there is nothing, then it is generally assumed to be **b**.

The few magnitude figures with an asterisk are from the SDSS estimated g magnitude.

The Galaxy Trios and Triple Systems Catalogue (pages 8 to 25) lists the galaxy trios starting in the Pegasus/Andromeda region moving eastwards.

- The first three columns contain a “*” if it is one or more of the following:
 - **M** – Miles Paul’s objects. His Atlas is now available on the [Webb Society](#) website for free.
 - **A** - Required objects for the Astronomical League Galaxy Groups and Clusters observing project.
 - **C** - Very challenging trios and triple systems for those galaxy hounds with huge scopes, specifically 20” and larger. Some of these require very good seeing to resolve the closely spaced components.
- **R** – “Rating” scale for each trio. The scope size listed is what I recommend/think you will need to see all three members under good skies, typically NELM 6 or better. This is based on my experience after observation of these objects or how it appears on the images. I’ve seen enough to gather a pretty good idea of what is required.

Rating	Recommended telescope
1	8” or less
2	8 to 12”
3	12 to 18”
4	20” or larger

- **KTG** – The KTG Catalogue number for Part I of isolated triplets of galaxies researched by a group of Russian astronomers in a paper published in *Astrofizicheskie Issledovaniia*, vol. 11 in 1979. This list contains 84 isolated triples of northern-hemisphere galaxies with apparent magnitudes of the components $m < 15.7$ mag. If you want to do the KTG observing program, see page 277 for the KTG catalogue sorted by KTG. It is the same overall list, but filtered by KTG.
- **Galaxies** – The catalog names of each galaxy of the trio
- **RA** and **Dec** - in Epoch 2000.0
- **Mag** – published magnitudes of each member listed in the same order. Source: RC3 or NED
- **Constellation**

Any comments or to share any observations, send them to Alvin.Huey@FaintFuzzies.com.

Any feedback or suggestions would be greatly appreciated. I hope to keep this resource updated and made available to all of you, the deep sky observer.

August 12, 2012	<ul style="list-style-type: none"> • Enhanced NGC 735 and identified the nearby galaxy as V Zw 146 • Corrected naked eye finder chart for NGC 6120
August 31, 2012	<ul style="list-style-type: none"> • Enhanced magnitude scaling of finder charts.

Date	Revision
March 22, 2013	<ul style="list-style-type: none"> • Added the rest of the KTG Catalog that I didn't add earlier. Mostly bright stuff or already included in my other guides such as Arp and Hickson. Included them for the sake of completeness of the KTG catalog. Added a column in the index indicating which trio is a KTG trio. <ul style="list-style-type: none"> ○ UGC 12897, 12899, CGCG 499-33 (Hick 99) ○ UGC 14, 12915, 12914 ○ NGC 7640, UGC 12588, 12632 ○ M-31, 32, 110 ○ UGC 3995A/B, CGCG 147-63 ○ NGC 3016, 3020, 3024 ○ UGC 6361A/B/C, CGCG 11-68. 11-75 ○ NGC 3003, 3021, 3067 ○ M-81, 82, NGC 3077 ○ NGC 3465, 3523, UGC 6090 ○ NGC 4169, 4170, 4174, 4175 ○ NGC 5350, 5353, 5354 ○ NGC 5965, 5963, 5971 ○ NGC 6745 ○ IC 1392, UGC 11775, 11781 <p>Note: I've made it a little easier for those who have the most previous version of this guide.</p>
March 26, 2013	<ul style="list-style-type: none"> • Very minor enhancements <ul style="list-style-type: none"> ○ Enhanced TOC ○ Moved the index to the beginning ○ Enhanced recommended reading section.
April 8, 2013	<p>Added new objects:</p> <ul style="list-style-type: none"> • II Zw 99 • NGC 273, 274, 275 (KDG 7) • NGC 3607, 3605, 3608 (KDG 90) • NGC 4564, 4567, 4568 (KDG 150) • NGC 6677, 6679, IC 4763 (KDG 200)
April 12, 2013	<p>Minor edits – mainly to the How to Use section. Added cover page</p>
May 15, 2013	<p>Added new object:</p> <ul style="list-style-type: none"> • IRAS 06370+3623 <p>Corrected the catalog name for KTG 59C (page 224) from CGCG 401-1 to CGCG 337-35.</p>
June 11, 2013	<p>Discovered that NGC 5619 trio was listed twice, once in Virgo and again in Bootes. Deleted the latter.</p>
August 8, 2017	<p>Added a newly discovered quad gravitationally lensed quasar, Andromeda's Parachute.</p>
March 2024	<p>Minor edits and formatting. No new objects.</p> <ul style="list-style-type: none"> • Enhanced resources under Additional Resources. • Flipped the list from landscape to portrait format. All objects, including secondary or tertiary galaxies, are listed with full catalogue name, so the PDF is searchable. • Added a separate KTG catalogue (see page 277-282). • Resolved remaining missing magnitude figures for uncharted galaxies.
