# The Herschel List and Observing Project

William Herschel published a series of three papers, Catalogue of Nebulae and Clusters of Stars (CN), totaling 2,500 objects from 1786 to 1802. This catalogue and William's son, John, expanded catalogue, *General Catalogue of Nebulae and Clusters and Clusters of Stars* (GC), was the precursor of the now famous, New General Catalogue (NGC) that is still be used today. The **Herschel 400 catalogue** is a subset of William Herschel's original Catalogue of Nebulae and Clusters of Stars, selected by six amateurs from the Ancient City Astronomy Club in St. Augustine, Florida in 1980. They decided to do this after reading a letter in Sky & Telescope magazine by James Mullaney, who suggested the list 2,500 Sir William Herschel objects be generated for observing after completing the list of Messier objects. This list, known as the "Herschel 400", has gained popularity over the years, and has become a much sought after list by advancing observers. Many observers who complete this list can get a certificate and pin from the Astronomical League.

The objects of the Herschel Part I list are much brighter than many think they are, so this is a great list for those who completed the Messier list. The cool thing about of Herschel Part I are: all are NGC objects, all are visible in a 6" telescope and all are visible from mid-northern latitudes. In fact, 14 Part I objects are Messier objects.

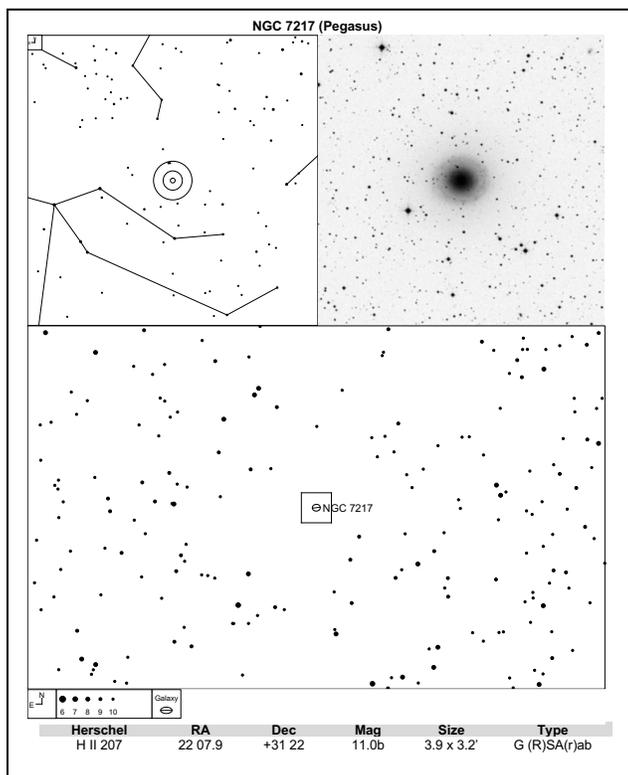

In August 1997, the Herschel Part II consisting of the next 400 objects were added by members of the Rose City Astronomers (RCA) of Portland, Oregon. Most of the objects in this list are galaxies and between magnitudes 11 and 13. It was recommended by RCA that one uses a 10" telescope to successfully observe the entire Part II list, even though an 8" can pick up most of them. A very experienced observer under darks skies can do the entire Part II list with an 8". You can find Part II on my website, where you picked up this Part I.

A few tips to observe the Herschel 400 Part I and II objects.

- Take your time and try to observe for detail rather than check off and scoot to the next object.
- Take notes while observing using pre-printed observing log pages. I print mine out and have it coil bound.
- Those with larger telescopes, such as 10" or larger, spend extra time and try to see if you see details.
- Those with even larger scopes, such as 20" or larger, even though you may have seen it, look for details that you may have missed, especially on a transparent and steady night.
- Use a nebula filter for nebulae. A narrowband, such as the Lumicon UHC, Omega Filters NPB or Orion Ultrablock works very well for emission and planetary nebulae. For reflection nebulae, use a broadband filter for reflection nebula as the narrowband won't work as well as they are just reflected starlight.
- This guide is grouped by constellation starting at Pegasus. As the night or seasons progress, the order of the guide goes forward.
- Try and group your observations to a constellation at a time so you can just hop from one to the next, instead of jumping all over the sky.
- Try to observe objects that are near the meridian, if possible. The meridian is the highest point above the horizon the object will ever reach in the sky.
- Save the open clusters for poorer than average nights as they tend to be visible even less than optimal conditions.
- Save the dimmer objects for optimal conditions, especially the large lower surface brightness galaxies.

Whew! Managed to keep this to one page! 😊  
Now go out and give it a go!

# How to Use the Herschel 400 Observer's Atlas

The top left panel contains the naked eye field with the TelRad™ superimposed on the center of the Herschel 400 object. The top right panel contains the inverted Digital Sky Survey image. The DSS image ranges from 15' to 60' at 15' increments.

The bottom panel is a finder field of about 4.8° across and 3.0° high. The finder field is wide enough for the finder scope and detailed enough for those who choose to use a low power eyepiece as a “finder”. The limiting magnitude of the field stars is set to 10.0, otherwise noted on the legend. The square field of the DSS image is superimposed on the finder chart.

All charts and images are oriented north pointed up and west to the right.

The table below lists the following information:

**Herschel** – Herschel class and number. See next page for classes.

**RA and Dec** – the coordinates in Epoch 2000.

**Mag** – the listed magnitude as appears in various catalogues.

The source of the **magnitude** and **size** is generally from MegaStar version 5, which is pulled from various sources, such as RC3 (Third Reference Catalogue of Bright Galaxies), Archinal for globular clusters, Lynga for open clusters, Strasbourg-ESO for planetary nebulae, and Lynds for bright nebulae.

Blue magnitude is **b**, photographic is **p** and visual is **v**. If there is nothing, then it is generally assumed to be **b**. The listed blue and photographic magnitudes is generally a magnitude fainter than the visual magnitude.

**Size** – the listed size as it appears in various catalogues.

**Type** – See next two pages regarding the type and classification.

Three indices are provided. The first index starting on page 8 lists object by the order of this observing guide, the second index is sorted by NGC (page 382), and the third index is sorted by constellation (page 393). The list starts in the constellation Pegasus region and working eastwards.

Any comments or to share any observations, send them to [Alvin.Huey@FaintFuzzies.com](mailto:Alvin.Huey@FaintFuzzies.com).

Any feedback or suggestions would be greatly appreciated. I hope to keep this resource updated and made available to all of you, the deep sky observer.

# Herschel Type and Object Classifications

## Herschel Classes (first column)

Class I – Bright Nebulae

Class II – Faint Nebulae

Class III – Very Faint Nebulae

Class IV – Planetary Nebulae

Class V – Very Large Nebulae

Class VI – Very Compressed and Rich Clusters of Stars

Class VII – Compressed Clusters of Small and Large Stars

Class VIII – Coarsely Scattered Clusters of Stars

## Object Type

Each listed object lists the type followed by the classification.

OC = Open Cluster

GC = Globular Cluster

G = Galaxy

PN = Planetary Nebula

RN = Reflection Nebula

EN = Emission Nebula

## Open Clusters (R.J. Trumpler)

3 part designation (concentration, range of brightness of members, and richness)

### Concentration

I – strongly concentration

II – moderately strongly concentrated

III – moderately weakly concentrated

IV – weakly concentration

### Range of brightness

1 – small range

2 – medium range

3 – large range

### Richness

p – poor

m – medium

r – rich

If there is nebulosity present, the richness will be followed by an “n”

For example, “p n” – poor cluster with nebulosity

## Globular Clusters (H. Shapley and H. B. Sawyer)

Class I to XII – most concentrated to loosest

## **Galaxies (Hubble or De Vaucouleurs)**

### Spiral Galaxies

S or SA – ordinary spiral  
SB – spiral with bar  
SAB – intermediate spiral  
S0, SA0 or SB0 – Lenticular

### Rings

(R) or (r) – outer or inner ring present  
(S) or (s) – S-shaped (outer or inner)  
(RS) or (rs) – transition types (outer or inner)  
(R') – pseudo rings

### Spiral Arm tightness

a to d – early to late type spirals (tightest to loosest) The central bulge also decreases from a to d  
m – transition state – towards Im

### Lenticulars

S0<sup>-</sup>, S0<sup>0</sup>, S0<sup>+</sup> – early to late type

### Elliptical Galaxies

En, where n is a number from 0 to 9. 0 to 9 indicates round to very elliptical

### Irregular Galaxies

I – irregular  
Im – very irregular

### Other

sp – spindle  
pec – peculiar  
? – doubt regarding classification  
: – uncertainty regarding classification

## **Planetary Nebula (Vorontsov-Velyaminov)**

- 1 Stellar
- 2a Smooth disc – brighter towards the center
- 2b Smooth disc – uniform brightness
- 2c Smooth disc – traces of ring structure
- 3a Irregular disc – very irregular brightness distribution
- 3b Irregular disc – traces of ring structure
- 4 Ring structure
- 5 Irregular form
- 6 Anomalous form

## Original Papers by Sir William Herschel

Herschel, William. "Catalogue of One Thousand New Nebulae and Clusters of Stars". *Philosophical Transactions of the Royal Society of London* Vol. 76 (1786), 457–499.

Herschel, William. "Catalogue of a Second Thousand of New Nebulae and Clusters of Stars; with a Few Introductory Remarks on the Construction of t+he Heavens". *Philosophical Transactions of the Royal Society of London* Vol. 79 (1789), 212–255.

Herschel, William. "Catalogue of 500 New Nebulae, Nebulous Stars, Planetary Nebulae, and Clusters of Stars; with Remarks on the Construction of the Heavens". *Philosophical Transactions of the Royal Society of London* Vol. 92 (1802), 477–528.

## Books

Bratton, Mark. *The Complete Guide to the Herschel Objects: Sir William Herschel's Star Clusters, Nebulae, and Galaxies*. Cambridge, United Kingdom: Cambridge University Press, 2011.

Mullaney, James and Tirion, Will. *The Cambridge Atlas of Herschel Objects*. Cambridge, United Kingdom: Cambridge University Press, 2011.

Mullaney, James. *The Herschel Objects and How to Observe Them*. New York: Springer, 2007.

O'Meara, Steve. *Herschel 400 Observing Guide*. Cambridge, United Kingdom: Cambridge University, 2007.

Stoyan, Ronald and Schurig, Stephan. *interstellarum Deep Sky Atlas*. Cambridge, MA: Cambridge University Press, 2015

Stoyan, Ronald and Glahn, Uwe. *interstellarum Deep Sky Guide*. Cambridge, MA: Cambridge University Press, 2018

## Observing Programs

[www.astroleague.org/herschel-400-observing-program](http://www.astroleague.org/herschel-400-observing-program) - Astronomical League's Herschel 400 Program.

[www.astroleague.org/herschel-ii-observing-program](http://www.astroleague.org/herschel-ii-observing-program) - Astronomical League's Herschel 400 – Part II Observing Program

## Websites

[skyserver.sdss3.org/dr8/en/tools/chart/chart.asp](http://skyserver.sdss3.org/dr8/en/tools/chart/chart.asp) - SkyServer DR8 Tools for Visual Exploration (Sloan Digital Sky Survey)

[www.deepskyforum.com](http://www.deepskyforum.com) - The premier Deep Sky forum where advanced deep sky observers converge and discuss observing the deep sky.

[www.astronomy-mall.com/Adventures.In.Deep.Space](http://www.astronomy-mall.com/Adventures.In.Deep.Space) - Great source of observing projects for all skill levels.

[www.cloudynights.com](http://www.cloudynights.com) – Great resource for like-minded amateurs discussing most aspects of the hobby.

[www.ngcicproject.org](http://www.ngcicproject.org) – Collaborative effort between professional and amateur astronomers to identify original and corrected object list. Fantastic resource of anything related to NGC and IC catalogues.
